

BRAASCH Engineering Consultants
Security through Central Video Surveillance

SAFETY is not without reason.

For more than ten years our engineering firm has been a competent partner for companies like AIRBUS, Beiersdorf, Deutsche Bank or Deutsche Telekom.

From advice through to the development and installation of tailor-made solutions, to staff training – we offer everything from a single source.

A steadily growing team of engineers, computing scientists, physicists and IT-technicians guarantees the essential know-how for the best possible results.

You too can benefit from this experience.

“At last I can sleep again with the window open and an easy mind.”

- an unnamed customer.

Most people take this for granted. For somebody who has been attacked / mugged in his own sleeping room this was unthinkable / unimaginable. For us it is the best possible compliment.

A conventional alarm system cannot offer this safety. It reacts when it is much too late. Doors or windows have already been damaged. Worst case: The burglar is already in your sleeping room.

Don't take it this far ...

feeling safe!

„Principiis obsta. - Resist the first beginnings.“

- Ovid

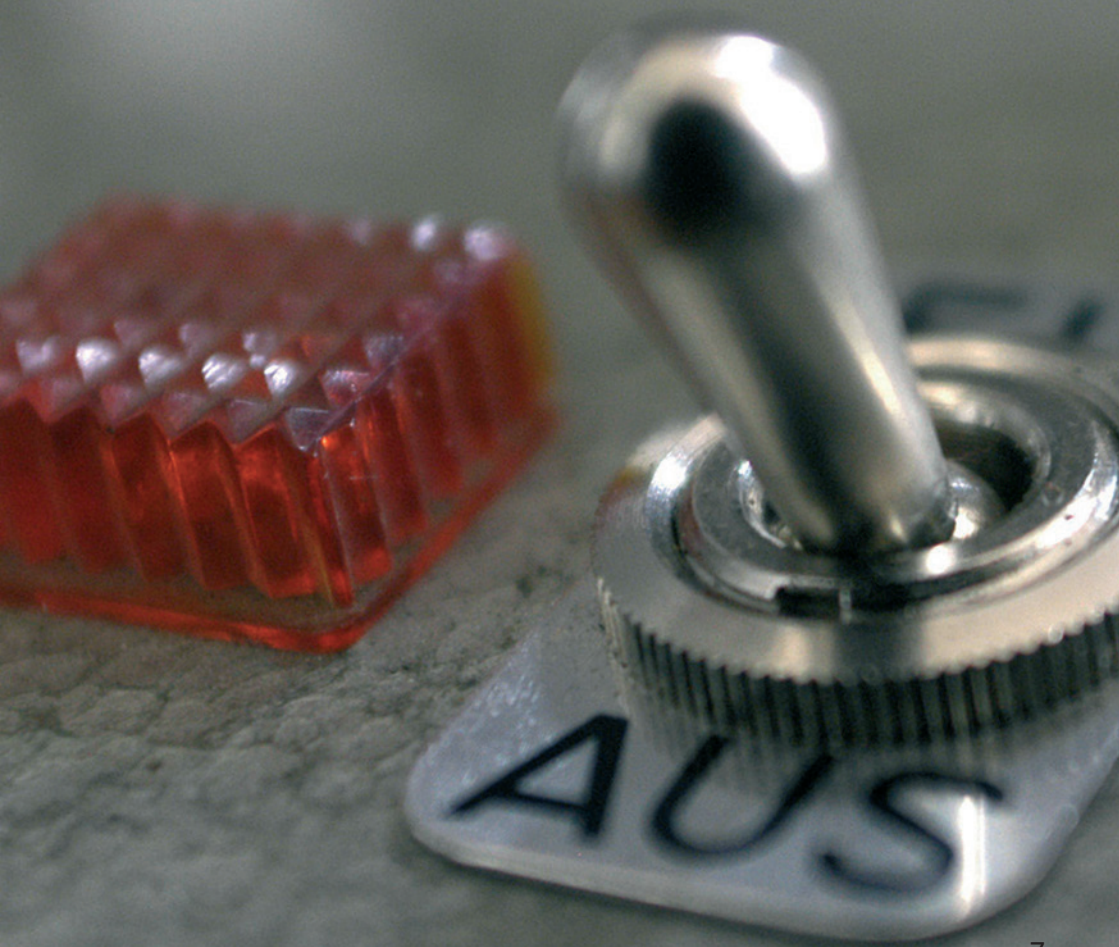

A good system has to start earlier. It must detect the intruder as soon as he enters your property. But an excellent safety system can do much more. Not only does it detect every intruder immediately, but it also makes sure that he leaves your property as quickly as possible.

State-of-the-art sensors already detect the intruder at your property line. In a split second this incident is reported to our control centre.
(US: center)

Our expert personnel has a perfect overview via cameras. Through hidden microphones and (loud)speakers the control centre directly communicates with the intruder.
The intruder is purposefully put under pressure.

Our experience shows: He panics and flees.

we react before it is too late.

„History is the sum total of things that could have been avoided.“

- Konrad Adenauer

Who doesn't know this: Again and again without apparent reason shrill sirens sound every-where. This no longer frightens anyone off / discourages anybody.

But it is all the more annoying. And if the alarm system is connected to the police or a secu-rity firm you will quickly incur high costs.

With conventional alarm systems you are confronted with a dilemma: If their reaction is high-ly sensitive there will be false alarms. If it is too insensitive, safety cannot be guaranteed.

With our system this problem is a thing of the past. Every person entering your property will be checked by our control centre. You can sleep with an easy mind and will only be notified if there is a real danger.

This makes your life easier and saves money.

no more false alarms!

„The man who trades freedom for security does not deserve nor will he ever receive either.“

- Benjamin Franklin

Your privacy is protected too!

Safety means more than the protection of your property. It stands for the protection of your liberties. It signifies the protection of your privacy. Therefore our control centre only has access to your property if it is really necessary.

And if the access to certain areas is sometimes not wanted, just deactivate it. Straightfor-wardly and at any time. Worldwide.

Trust us: Your privacy is kept private.

freedom and security?

SECURITY

„Within the love of entirety the individual appears.“

- Krishnamurti

Your system: As individual as you.

You do not have to adapt to a good safety system. It will adapt to you. Therefore our specialists (will) develop an extensive concept together with you. Exactly as you imagine it.

But our systems can do more:

You wish to have your property in sight – always and from all over the world?

Perhaps your fire alarm system should be integrated?

There are endless possibilities. Contact us!

tailor-made for you.

protecting your

values:

we react before it is too late.
